Mira Lindqvist

AI Engineer · Berlin, Germany · mira.lindqvist@example.com · github.com/mira-lindqvist-demo

Summary

Backend and AI engineer with 6+ years of experience building Python services, data pipelines and LLM-powered products. Comfortable owning features end to end, from database schema to deployment.

Experience

Senior Backend Engineer — Quillbyte Analytics GmbH, Berlin

03/2022 – present

- Built a retrieval-augmented generation (RAG) assistant over 40,000 internal support documents using FastAPI, PostgreSQL with pgvector and OpenAI models, cutting average ticket handling time by 23%.
- Designed an evaluation harness with 300 labeled question–answer pairs to track retrieval recall and answer faithfulness before every release.
- Migrated 12 batch ETL jobs from cron scripts to Apache Airflow, adding retries, alerting and data quality checks.
- Introduced structured logging and OpenTelemetry tracing across 8 Python microservices, reducing mean time to resolution for incidents from 3 hours to 45 minutes.
- Mentored two junior engineers and ran weekly code review sessions for the backend team.
- Containerized all services with Docker and set up GitHub Actions pipelines for tests, linting and image builds.

Backend Developer — Tundrabox Logistics AB, Stockholm

09/2019 – 02/2022

- Developed REST APIs in Python (Django REST Framework) for a shipment tracking platform serving 1.2 million requests per day.
- Optimized slow PostgreSQL queries with indexing and query rewrites, lowering p95 API latency from 900 ms to 180 ms.
- Built an event pipeline with RabbitMQ to sync shipment status between the warehouse system and the customer portal.
- Wrote integration tests with pytest and Testcontainers, raising backend test coverage from 41% to 78%.
- Deployed services to AWS (ECS, RDS, S3) using Terraform.

Junior Software Engineer — Kestrelworks Labs, Uppsala

06/2018 – 08/2019

- Implemented data cleaning scripts in Python and pandas for sensor data from 200 field devices.
- Built internal dashboards in React and TypeScript to visualize device health.
- Automated weekly reports with SQL and Jupyter notebooks.

Education

M.Sc. Computer Science — Uppsala University

2016 – 2018

- Thesis: "Dense passage retrieval for Swedish legal documents", fine-tuning a BERT bi-encoder with PyTorch.
- Courses: machine learning, information retrieval, distributed systems.

B.Sc. Computer Engineering — Uppsala University
2013 – 2016

Skills

- Programming languages: Python, SQL, TypeScript, Go (basic)
- Backend: FastAPI, Django, REST, RabbitMQ, Celery, Airflow
- Data and AI: PostgreSQL, pgvector, pandas, PyTorch, Hugging Face Transformers, LangChain, LangGraph, RAG, LLM evaluation
- Infrastructure: Docker, GitHub Actions, AWS (ECS, RDS, S3), Terraform, OpenTelemetry

Languages

- Swedish (native), English (C1), German (B2)
